

WATCH, WAIT, AND WONDER

— INTRODUCTION —

2008

2 DAY INTENSIVE TRAINING

Mirek Lojkasek

Ph.D., C.Psych

23 and 24 September 2008 ~ GLASGOW

Workshop Description

WATCH, WAIT, AND WONDER IS AN INFANT/CHILD-LED FORM OF PSYCHOTHERAPY THAT AIMS TO INTERVENE IN THE MOTHER-INFANT RELATIONSHIP IN A WAY THAT FOSTERS THE DEVELOPMENT OF A SECURE RELATIONAL CONNECTION BETWEEN MOTHER AND INFANT/CHILD.

In this workshop, the theoretical underpinnings in attachment theory and therapeutic techniques of Watch, Wait, and Wonder will be described. The focus of clinical work on Watch, Wait, and Wonder has been on developing ways of including the infant more fully

in relational psychotherapy. Watch, Wait, and Wonder is a dyadic psychotherapy that works directly and immediately with the relationship through empowering the infant in the therapy. This is achieved by creating a space where the attentive parent allows the infant/child to engage in unimpeded sensorimotor activity and play in order to explore his/her relationship with the parent in his/her own way.

More specifically, in this form of therapy, the parent is asked to follow the infant's/child's spontaneous and undirected activity in much the same way that a therapist observes and follows the lead of an adult patient. Although this infant/child-led approach centres on the infant/child-parent relationship, it is guided by the infant/child activity.

Also central to the process is engaging the parent to be reflective about the child's inner world of feelings, thoughts and desires, through which the parent recognizes the separate self of the infant and gains an understanding of her own emotional responses to her child.

In the workshop, the history and theoretical and technical aspects of Watch, Wait, and Wonder are presented and compared with other common forms of dyadic therapy. Participants will be given the opportunity to observe and reflect using the Watch, Wait, and Wonder therapeutic principles with videotaped material.

Workshop Outline

- History and description of Watch, Wait, and Wonder
- Description of other infant/child-led approaches
- Attachment theory as a framework for Watch, Wait, and Wonder
- Assessment of children and families for Watch, Wait, and Wonder
- Watch, Wait, and Wonder Procedure: type and arrangement of toys, instructions, how sessions are organised
- Participant practice in viewing parent-child interactions from an attachment perspective:
 - therapeutic process with the parent-infant/child
 - the therapist's role in Watch, Wait, and Wonder
 - practising the process of observation and reflection
- Exploration of problems and issues that arise in Watch, Wait, and Wonder:
 - for the parent
 - for the child
 - for the therapist
- Process: Course of Watch, Wait, and Wonder Using Videotapes and Case Descriptions
- Integrating Watch, Wait, and Wonder into clinical practice
- Watch, Wait, and Wonder – focussing on young children age 8 months to 36 months, with some reference to older children

Educational goals

- The theoretical underpinnings of Watch Wait and Wonder in attachment theory
- An understanding of the therapeutic techniques that empower the infant in relational psychotherapy
- A comparison of WWW with other common forms of dyadic therapy
- An opportunity to develop skills using Watch Wait and Wonder by practice in viewing parent-child interactions from an attachment perspective
- Exploration of problems and issues that arise in Watch Wait and Wonder for the parent, the child and therapist
- Integration of Watch Wait and Wonder into Clinical settings
- WWW practice will be demonstrated using videotaped sessions and in depth case descriptions

Location

The workshop is to be held at:

The Malmaison, Glasgow.

278 West George Street, Glasgow, G2 4LL

Follow the directions on the hotel [website](#), or simply put G2 4LL into your Global Positioning System (GPS). If all else fails give them a call on 0141 572 1000.

Mirek Lojkasek, Ph.D., C.Psych.

Mirek Lojkasek is a psychologist in Private Practice and Research Associate at the Hincks-Dellcrest Centre, and Lecturer in the

Department of Psychiatry, Faculty of Medicine, University of Toronto. Dr. Lojkasek has contributed to conceptualising and refining the practice of Watch, Wait and Wonder (WWW), and has co-authored the manual *Watch, Wait and Wonder: A manual describing a dyadic infant-led approach to problems in infancy and early childhood* (Muir, Lojkasek, & Cohen, 1999). He was also a co-principal investigator in a study which examined the outcome of the WWW model.

Dr. Lojkasek uses Watch, Wait and Wonder in his work with infants, children and their families. He has presented extensively on Watch, Wait and Wonder and other aspects of assessment and treatment of young children and their families, and supervises practitioners from all areas of mental health. Dr. Lojkasek conducts research on early parent-child relationships, attachment, developmental psychopathology, early interventions and psychotherapy.
